

Astrophysics was a fascinating subject where I was able to challenge my understanding of the universe through science and learn interesting concepts. In class, we explored everything from the evolution of the universe to the possibility of time travel, with the use of scientific theories such as Einstein's Special Relativity. We were also given the opportunity to contribute our own thoughts and speculate topics through group discussions and fun activities, which typically ended in an existential crisis on my part. If you enjoy physics, learning about the absurdity of space or thinking about questions that keep you up at night (i.e. the meaning of life), I highly recommend taking Astrophysics!
